PREAMBLE

The Department of Pharmacognosy conducted the seminar on “Introduction to Patents in India” for the teaching faculties. Dr. Padmaa M Paarakh, Professor and Principal, The Oxford College of Pharmacy, Bangalore delivered the lecture. There were 20 participants.

Patents encourages innovations and subsequently it leads to industrial progress. A thorough knowledge of patentability criteria, its filing process and its rights is essential for individuals who are looking for protection of their ideas and innovations.

The content delivered in the seminar is as follows:

The speaker initiated the seminar topic titled as “Introduction to Patents in India” with brief history. Initially, the patent act was named as ‘Patents and Designs act of 1911’, later which it was replaced as Indian Patents Act of 1970 which was enforced on 20th April 1972. In India, the patent system is governed by Indian Patents Act of 1970.

Patents are legal documents issued by the Government bodies to inventors with the intention to protect their inventions. The invention should be novel to be patentable under the Indian Patent Law. The Indian Patent System operates through administrative office called as the Controller of Patents. The objective of the patent law is to encourage new inventions, scientific research, new technology and industrial progress.

The procedure for patent is as follows: Step 1- Idea or concept of invention, its field and its benefits. Step 2 consisting of drawing, diagram or a sketch which gives description about invention. Step 3 to check whether the invention is patentable or not in line with the Indian Patent Act. Step 4- to check whether invention meets all patent criteria as per the Indian Patent Act. Step 5- filing provisional patent application. Step 6 includes filing the complete specification of the patent, the application is published. Step 7 consists of scrutinization of the patent application where patent subject, the novelty, lack of clarity, invention steps are examined. Step 8 includes answering the queries raised by the patent office. Step 9 includes clearing all the objections raised regarding the invention. Step 10 verifies once again whether patent requirements are met, then the application will be placed for the grant.

OUTCOME

There were 20 participants in the seminar. After attending the seminar, the participants understood about patents and its evolution. It is an intellectual property where the owner reserves the exclusive rights excluding others from making, using, selling an invention. Additionally, the steps involved in filing a patent were also briefed to the participants. The speaker also stressed on creating new inventions.
